(THE INTERNATIONAL DIVISION OF PLANNED PARENTHOOD FEDERATION OF AMERICA)

NATIONAL PRIMARY HEALTH CARE DEVELOPMENT AGENCY (NPHCDA)

NATIONAL GUIDELINES FOR THE
INTEGRATION OF ADOLESCENT AND YOUTH
FRIENDLY SERVICES INTO PRIMARY HEALTH CARE
FACILITIES IN NIGERIA

June, 2013

Made possible through a grant from the
FORD FOUNDATION

Foreword

In recognition of the absence of a framework for adolescent and youth friendly health services (AYFHS) in Nigeria, the Federal Ministry of Health in collaboration with partners developed the *National Action Plan for Advancing the Health and Development of Young People in Nigeria: 2010 -2014*. The action plan stipulates the integration of adolescent and youth friendly health service into the Primary Health Care System as one of the key actions for improving the access of young people to appropriate friendly services.

This document builds on the provision of the Action Plan and provides guidance on how the integration of AYFHS into the existing PHC facilities in Nigeria should be carried out. In this essence, this document provides programme planners, implementers, and health managers at various levels with strategic considerations and broad guidance for initiating and implementing AYFHS within the context of PHCs as an integrated service with the aim of achieving the goals of the National Policy on the Health & Development of Adolescents and Young People in Nigeria. This document has been developed based on a combination of documented evidences about the health situation of Nigerian adolescents, the state of AYFHS in the country and global best practices in ensuring the access of young people to friendly health services in public sector facilities.

This document is highly recommended for use in the various PHC facilities to improve the quality of services and the overall health and development of the teeming adolescents and other young people in Nigeria.

Prof. C.O. Onyebuchi Chukwu
Honourable Minister of Health

Preface

Adolescents and young people represent the hope and future of Nigeria. Yet, this group faces enormous challenges in accessing the services they need to lead healthy and productive lives. Nearly one-third of the Nigerian population is between the ages of 10 and 24; the Nigerian government has recognized the public health implications of marginalizing this group and has passed federal legislation to ensure that their health care needs are met. And yet, at the state and local level, key stakeholders continue to stand in the way of young people's access to sexual and reproductive health (SRH) information and services for fear of promoting promiscuity among the age group. Most services for young persons are provided by non-governmental organisations (NGOs), rather than through the public health care system. The reality remains that grassroots public health facilities possess great potential to sustain youth-friendly SRH services, particularly because these facilities already exist within communities, receive government-support, and are by definition more stable than NGO facilities. Primary Health Centres (PHCs) were instituted to provide the first line of care, including prevention of ill-health among the populace. They constitute the nearest health care facility to the community. PHCs are funded by Local Government Area Councils with a specific annual budget allocation.

A number of policies to address adolescents health and development issues exist: *The National Adolescent Health Policy (1995)*; *The Nigeria National Policy on the Health & Development of Adolescents & Young People in Nigeria (2007)*; *The National Strategic Framework on the Health and Development of Adolescents & Young People in Nigeria (2007)* and *The Action Plan for Advancing Young People's Health and Development in Nigeria (2010)*. Regrettably, these policy frameworks, plans and efforts do not specifically address the needs of adolescents at the primary level of care in Nigeria. The consequence is the general assumption that the PHCs exist to meet the needs of pregnant women and children under five years of age for antenatal care and immunization services. Strategic interventions that combine community outreach, education, and the provision of high quality, youth-friendly services at the PHC level can prevent unnecessary deaths and life-threatening infections among adolescents and youth.

This national guideline draws upon evidence obtained from surveys, desk reviews and consultations with academics, NGOs, private sector representatives, experts in the field of adolescents and youth, community leaders, youth leaders and other relevant stakeholders.

The integration of AYFHS into PHCs, as presented in this document, builds on four strategic elements: 1) integrated health service delivery, 2)governance and management, 3)youth involvement, and 4)supportive resources and interventions. This document provides a step-by-step approach in implementing integrated AYHFS. It also outlines the minimum package of services for AYFHS in Nigeria, including but not limited to the following service delivery components: clinical preventive services, community-based outreach, treatment/curative services and referral services. The document lays out a three-year action plan to further guide programme implementers and policy makers in the process of integrating AYFS into PHCs in Nigeria.

It is our expectation that the national guideline will provide the NPHCDA operatives nationwide, ample opportunity to learn from a phased implementation that will allow adjustments to suite regional and cultural peculiarities whilst expanding access to adolescent and youth-friendly sexual and reproductive health care services in public primary health care facilities in Nigeria. This allows for a cost effective scale-up nationwide afterwards. I therefore urge all stakeholders to do all that is required to ensure implementation of this guideline at the lowest level of care for the improvement of health and development of adolescents and youth in Nigeria.

Eremutha Francis (Ph.D)
Country Director for Nigeria
Planned Parenthood Federation of America

Acknowledgements

This document reflects the dedicated efforts of a wide array of stakeholders involved in adolescents and young people's health in Nigeria, including staff of government agencies at the federal and state levels, academics, civil society organisations, individual experts and young people themselves. The Federal Ministry of Health (FMOH) hereby acknowledges, with deep appreciation, the contributions of all organisations and individuals that made the development and production of this important national document a reality.

In particular, FMOH appreciates the technical partnership of Planned Parenthood Global, a division of Planned Parenthood Federation of America, led in Nigeria by Country Director Dr. Francis Eremutha, and the National Primary Healthcare Development Agency (NPHCDA) as well as the funding support from Ford Foundation. FMOH also appreciates the excellent efforts of the consultant, Prof. Adesegun Fatusi, ably supported by Mrs. Bamidele Bello and Dr. Adesola Sangowawa. The secretarial support of the Women Friendly Initiative (WFI) is also appreciated.

The commitment of the officers of the FMOH who were at the driving seat of the initiative was critical to the overall success achieved. In this regard, the tireless efforts of Adolescent and School Health team led by Mr. David Ajagun, Deputy Director, and Dr. Christopher Ugboko, the head of Division of Gender, Adolescent/School Health and Elderly Care (GASHE) are specially recognised. Finally, the input of our young people, whose experiences, perspectives and voices helped to practically shape this document, is deeply appreciated.

Dr. W. I. Balami, mni
Head, Family Health Department, FMOH

1. INTRODUCTION

1.1. Background

The primary aim of this document is to provide a framework for the integration of AYFHS into the existing PHCs in Nigeria. The development of this document was informed by evidence from national studies that have documented the poor availability and inadequate state of adolescent and youth friendly health services (AYFHS).^{1,2} The document was developed in the context of the *National Action Plan for Advancing the Health and Development of Young People in Nigeria*.³ The Action Plan stipulates the integration of AYFHS into the primary health centre (PHC) system as one of key actions for improving the access of young people to appropriately friendly services.

AYFHS are facility-based services that effectively attract adolescents and youth, provide a comfortable and appropriate setting for serving them and responsively meet their needs, as well as succeed in retaining these young clients for continuing care.⁴ From a quality perspective, the World Health Organisation (WHO) indicates that such services must be equitable, accessible, acceptable, appropriate and effective.⁵

A WHO Technical Working Group has defined integration as “the organisation, coordination, and management of multiple activities and resources to ensure the delivery of more efficient and coherent services in relation to cost, output, impact, and use (acceptability)”⁶. In the context of this document, and with a focus on the integration of AYFHS into PHC, integration is regarded as a process whereby services are offered to young people in PHC settings as an integral component of care and part of routine activities of public health facilities in such a way that it is of high technical quality and meets the expectation of young

⁶ World Health Organisation HIV, FP/RH, MNCH Technical Working Group, March 2011

people resulting in increased efficiency and effectiveness of services. In this context, young people get the care they need in PHC settings in Nigeria, when they need it, in ways that are user-friendly and that achieve the desired results and provide value for money and other resources. The goals are to: holistically address the different but often related health and development needs of young people; significantly improve the health outcomes of young people in the most efficient way; and achieve sustainable health impact through efficient and interoperable health policies, programs and organisations, support systems, services, and health promoting behaviours.

The National Primary Health Care Development Agency (NPHCDA) currently classifies PHC facilities in Nigeria into three categories⁷: (i) Primary Health Centres; (ii) Primary Health Clinics; and, (iii) Health Posts. The Minimum Ward Health Care Package (MWHCP) specifies⁸ the provision of adolescent health services at only the Primary Health Centres and Primary Health Clinics: thus, the integration of AYFHS into PHC system is to be carried out in these two categories of facilities – Primary Health Centres and Primary Health Clinics. The Primary Health Centre has the political ward as the basis/focus of its operations and covers 10,000 – 20,000 population, while the service delivery area for Primary Health Clinic is group of settlements/neighbourhood, villages or communities and its estimated coverage population is 2,000 – 5,000.

Specifically, the MWHCP includes adolescent counselling in the health interventions to be delivered at the Primary Health Care Clinics, and both counselling and treatment of common ailments among adolescents for the Primary Health Centres. Both type of facilities, however, are mandated to offer several other services that can be utilised by young people with different needs as their statutory health interventions cover the following: (a) control of communicable diseases (malaria, tuberculosis, sexually transmitted infections (STIs), including HIV/AIDS, (b) child survival, (c) maternal and newborn care, (d) nutrition, (e) non-communicable disease prevention, and, (f) health education and community mobilisation. The integration of services is designed to enable young people to utilise and benefit appropriately from as many of the PHC service interventions as they need.

⁸ National Primary Health Care Development Agency. Minimum Standards For Primary Health Care In Nigeria

This document identifies three pillars for providing AYFHS in an integrated form within the Nigerian PHC system:

- Improvement of the quality of services for young people
- Expansion of young people’s access to health services
- Increasing and appropriate utilisation of services by young people

Figure 1: Conceptual Framework for AYFHS Integration into PHCs in Nigeria

This document has been developed based on a combination of documented evidences about the health situation of Nigerian adolescents and state of AYFHS in the country, critical analysis of the scientific literature on young people’s health and service provisions, review of the Ward Minimum Health Care Package and the Minimum Standards For Primary Health Care In Nigeria, expert opinions, and lessons learned from field experiences. Among others, it benefitted from the technical insight and comments of the National Working Group on Adolescent Health and Development, representing diverse group of experts on adolescent health in Nigeria.

2. STRATEGIC COMPONENTS OF THE FRAMEWORK

The framework consists of guidance on the following elements (Integrated health services delivery

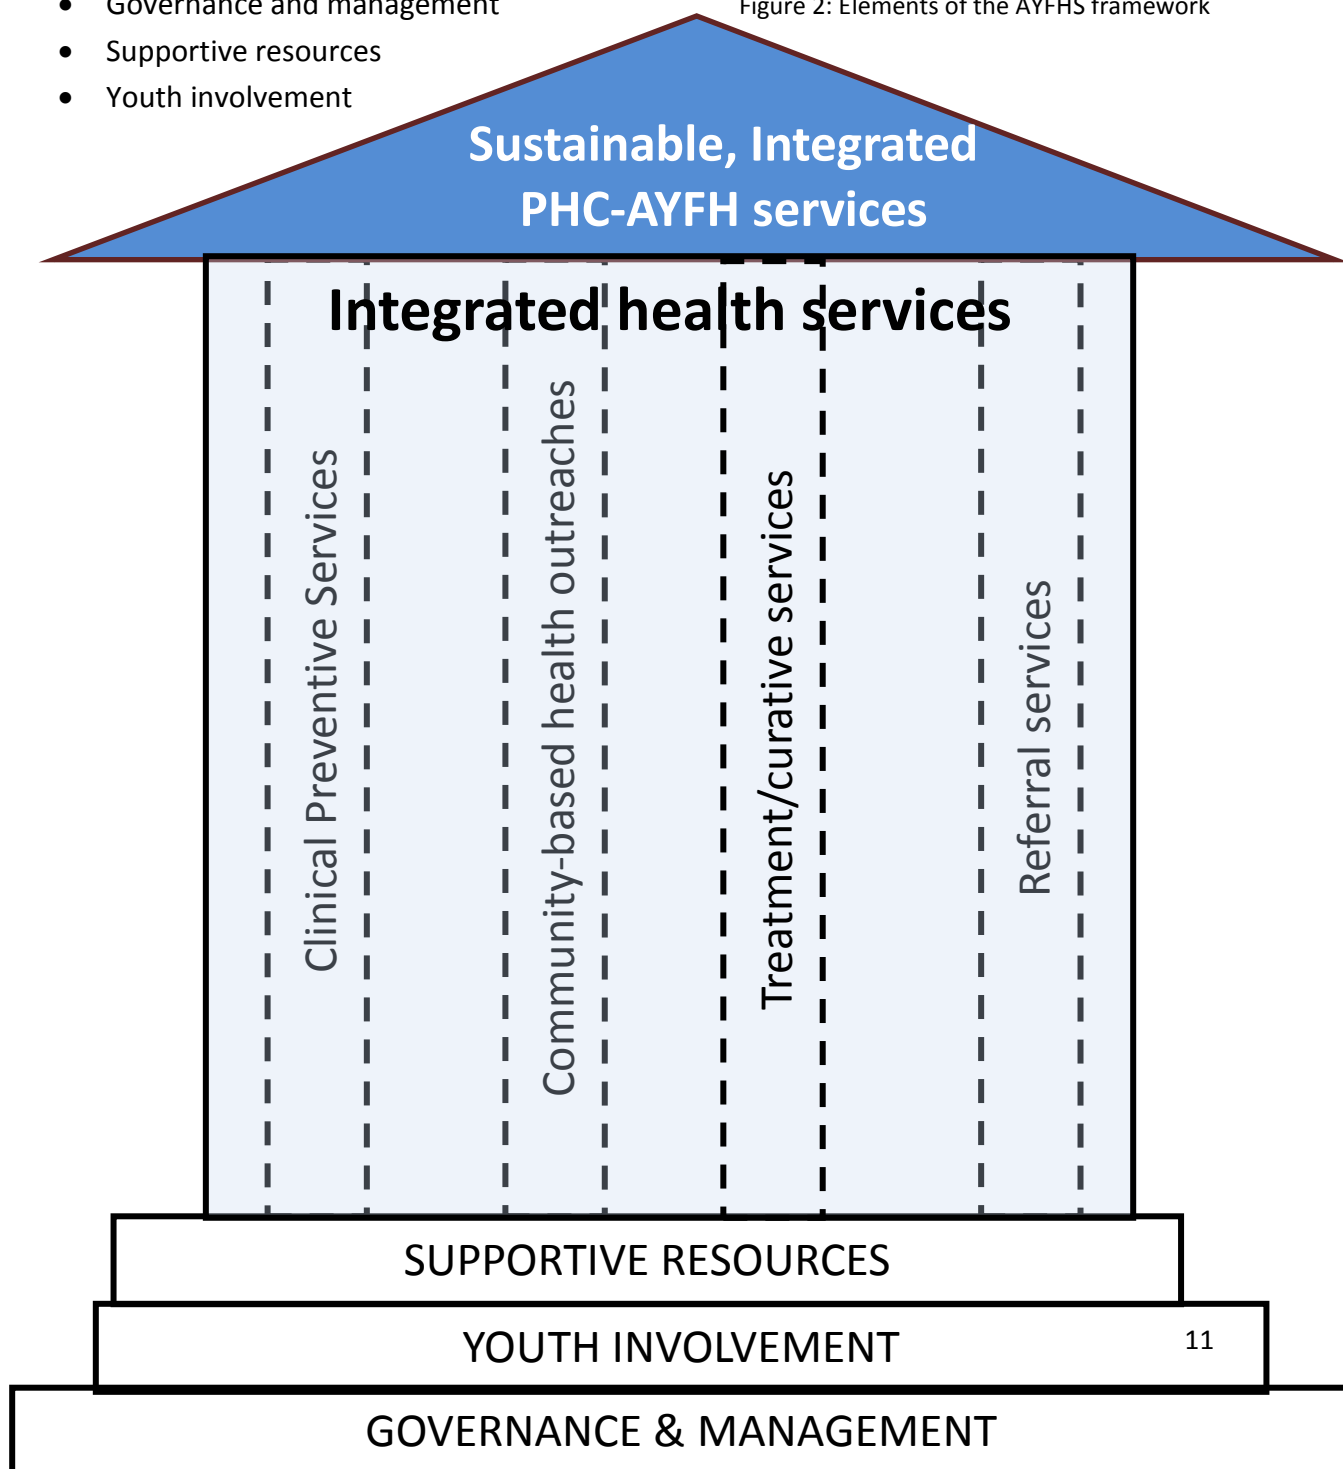

- Governance and management
- Supportive resources
- Youth involvement

Figure 2: Elements of the AYFHS framework

):

- Integrated health services delivery
- Governance and management
- Supportive resources
- Youth involvement

Figure 2: Elements of the AYFHS framework

2.1. Integrated health service delivery

Four groups of services will be offered as the core of the integrated package of services for adolescents and youth in Nigeria. These are: clinical preventive services, community-based outreaches, treatment/curative services, and referral services. These services have their basis in the NPHCDA Minimum Package of Services, and conform to global best practices. The services that are expected to be offered under each category are listed under the section on Minimum Package of Services (Section 3.3).

A. Clinical preventive services

The clinical preventive services aim to ensure the health and well-being of adolescents and youth by offering relevant preventive services, including health monitoring, health information and behaviour change communication, immunisation services, counselling services and mental health assessment.

B. Community-based health outreach services

Community outreach is important in expanding access of young people to health promotion activities and, in the spirit of PHCs, meets the demand for taking services directly to young people where they live and engage in daily vocations such as schools. School health services are particularly crucial in this regard, and the AYFHS team will conduct regular outreaches to schools in their catchment areas at least once a month as well as explore opportunities to build linkage with the school-based Family Life and HIV Education (FLHE) programmes. Outreach programmes must also target out-of-school adolescents and youth as well as reach out to communities where there are no PHC facilities. Community outreach to reach parents/guardians and community stakeholders will also be carried out regularly at defined periods, using appropriate community-based media and forums.

C. Curative and clinical management services

These services are primarily aimed at ensuring restoration of health and well-being, and prevention of adverse outcomes and complications. They include history-taking, physical

assessment, management of common complaints/problems among young people (such as menstrual health problems: treatment of sexually transmitted infections; and, treatment of minor injuries and accidents), pregnancy-related care (antenatal services, delivery of uncomplicated pregnancies, basic emergency obstetric care, post-natal services and post-abortion care); and common mental health related problems such as anxiety and adjustment challenges.

D. Referral to other services and service providers as necessary

The PHC level of care provides basic health services, and would need to refer more challenging clinically-related cases to higher level of care. Since the needs of adolescents and young people are also not limited to health challenges, there will be the need to refer clients to other appropriate adolescent/youth-servicing facilities, including educational and spiritual counselling. In this regard, it is important to build linkages and partnerships with schools, community centres, faith communities, private service providers, secondary health facilities, youth-serving civil society organisations (CSOs) and services/programmes targeting young people and their parents/guardians. It will be important to compile a list of such facilities/organisations and identify their areas of comparative competence, niche and strength so as to benefit maximally from relationships with them. It is also important to have formal relationships and terms of engagement with such facilities and organisations. Among others, strengthening/establishing two-way referral linkages with secondary healthcare facilities is crucial as part of continuity of services. Appropriate counselling should be given to adolescents and youth being referred to ensure that they are properly motivated to comply with the referrals.

2.2. Governance and management

A. Governance /programme management framework and accountability structure

Establishing appropriate governance/management structure, which fits into the PHC structure and is embedded with the local context of programming is essential as a foundation for success and sustainability. The aim of governance will be to ensure that the Local Government Authority (LGA) focuses sufficient effort towards the YFHS, including provision of needed resources, and make certain that programme implementation is on

track to produce desired results. The LGA PHC Coordinator will have the oversight for the programme in line with his/her statutory responsibilities. Ideally, the LGA should designate a LGA Adolescent and Youth Health Focal Officer (AYHFO) who will be the programme manager and provide supervision to the health facilities. He/she will be at the driver seat for the LGA's AYFHS initiative.

In line with the *National Policy on the Health and Development of Young People in Nigeria*, the LGA will have a Technical Working Group on Adolescent Health and Development, which will be headed by the Head of Administration of the LGA and assisted by the LGA PHC Coordinator. The LGA AYHFO will be the secretary of the Working Group. Other important sectors such as youth and development, education, women affairs and social development will be represented appropriately in the Working Group. The representative(s) of the Association of School Heads (primary and secondary), religious groups and young people themselves will be part of the group. The group will provide technical oversight and advice to advance the AYFHS initiative and review progress report from the programme manager on quarterly basis. The Working Group will also serve as an advocacy group for young people's health and development issues. At least one third of the members of the TWG shall be young people; approximately half of the young people will belong to each sex to ensure that considerations and decisions are gender-responsive.

At the ward and facility level, a Community Programme Advisory Board (COPAB) will be established. The core of the COPAB will be the members of the Development Committee — Ward Development Committee (WDC) at the level of the Primary Health Centre and Village Development Committee (VDC) in the case of Primary Health Clinic—with young people who constitute the Youth Advisory Group (YAG). Thus, the YAG will be a sub-unit of COPAB, and will serve as a platform for the programme manager to consult with young people and harvest their ideas and inputs into truly building effective and responsive AYFHS. All members of the YAG must be within the ages of 10 and 24 years. The Board will serve as a medium for community and youth inputs into AYFHS implementation and will be a voice for demanding quality services from health and related facilities. The strengthening of the WHDC, as a critical accountability structure, is important in the process.

B. Monitoring and evaluation

Monitoring and evaluation are important elements in programme management, and need to receive appropriate focus and emphasis to ensure that the provision of services is on track to achieve desired results. Available health systems management tools shall be modified to ensure they can capture the socio-demographic information and issues of young people appropriately. The programme will centrally develop additional complimentary tools where there is need for such to ensure that appropriate indicators can be generated for the AYFHS. The tools will adopt simple formats to promote their use and will be integrated into the regular Health Information Management System (HMIS). Each facility will be required to submit information about its youth-related services to the LGA HMIS officer, with a copy to the AYHFO. As part of the monitoring system, the State Adolescent and Development Desk Officer (SAHDDO) will be required to conduct quarterly visits to the LGAs to provide supportive supervision. For sustainability, the supervisory visit will be integrated in nature, covering beyond AYFHS to accommodate other related health fields. A standard tool will be used in service monitoring.⁹

Research, in a way, is integral to the monitoring and evaluation systems. Relevant research shall be carried out as part of the AYFHS activities, drawing on both primary and secondary data, to document activities, outcome and impact of the integrated services. Priority will be given to building capacity for research as well as to the design and implementation of action-oriented, operations and implementation research that would further strengthen the implementation of AYFHS and its impact.

2.3. Youth Involvement

The involvement of young people in health programming is an essential element in AYFHS: such involvement makes the design of services more acceptable and responsive to the needs of young people as well as improves the potential of the services to attract more peers. The programme will explore a number of mechanisms to involve young people, including the following:

⁹ WHO's quality assessment guidebook can be suitably adapted as AYFHS monitoring instruments

- Establishment of Youth Advisory Group that will make inputs into service design and other service/programme-related issues
- Training and engagement of young people as community-based AYFHS promoters and peer educators
- Engagement of young people as volunteers in the health facilities

2.4. Supportive Resources and Interventions

Appropriate human, material and financial resources as well as robust managerial system and related interventions in the areas of advocacy and demand creation are important to successful AYFHS programming.

A. Human resources development

Building capacity for AYFHS delivery is a key ingredient for delivering quality and appropriately friendly services to young people. The following training shall be priorities:

i. Training-of-Trainers

The strategy for sustainability in the area of capacity building is to facilitate the development of effective state training teams, which will consist of about five people for each state. States will identify potential trainers based on defined criteria. The state trainers will participate in a central two-week training-of-trainers training to build their capacity to undertake all the training needed in the state. The training will cover theoretical issues about adolescent health, hands-on counselling training, and practical clinical exposure and community outreaches, and training methodologies. The state trainers will conduct their first state-level training with support from national-level experts.

ii. Training for State and LGA Programme and Facility Managers

A five-day orientation programme on AHD and AYFHS, focusing on programme management, will be conducted for State and LGA focal officers and PHC Coordinators. The training will build on the programme already initiated by the Adolescent and School Health Unit of the Department of Family Health, Federal Ministry of Health to build the capacity of SAHDDOs. The training will focus on improving their knowledge of AHD and AYFHS

programme management issues. It will also equip them with skills to be able to sensitise various groups of health workers within their focal facility and LGA.

iii. Training for Clinic Service Providers

Health workers will be trained in AYFHS using the national training manual and the national service delivery protocol. The training will be for six days and will cover theoretical issues about adolescent health, counselling and clinical care.

iv. Training for Community-based AYFHS promoters

A three-day training programme will be organised for Community Health Extension Workers and Community Resource Persons, including Youth Peer Promoters, who will be involved in outreach programmes in the community.

v. Orientation for health facility leaders, and selected LGA and state stakeholders

A one-day sensitisation on AYFHS will be designed and implemented for the head of facilities, executives of health workers' union, members of the Local Government Service Commission and other selected and key stakeholders.

B. Facility structure, infrastructure, materials, and processes

Improving the quality of services is fundamental in ensuring that PHC facilities meet the desired standard of offering high-quality services in an environment that is appealing, acceptable and welcoming to young people. In structural terms, the service facilities must be physically attractive, provide young people with required privacy (both auditory and visual), and assure them of desired confidentiality, among others. In this wise, appropriate and simple modifications shall be made as deemed necessary to make the services acceptable to young people in terms of physical appearance, explicit policies, and operation mode. The emphasis is not on putting up new facility structures; rather, new structures will be an exception and expensive structural modifications shall be discouraged except where it is deemed to be absolutely necessary. Premium will be placed on having separate waiting room for young people where possible, which can be created by simple partitioning. Administrative procedures will also be altered as deemed relevant, and in consultation with Youth Advisory Groups; such could include separate time for consultation for young people,

speed-up process in waiting time, use of purposely designed consultation cards and effective use of information, communication technology (e.g. booking appointment online or through text messages).

Each facility will subscribe to specific standards in terms of package and quality of service¹⁰. A national consultative process, involving wide categories of stakeholders, will be useful to build consensus on the proposed minimum services. As part of promoting quality, and drawing from the experiences of successful health programmes in Nigeria and elsewhere, specific logo representing the AYFHS shall be adopted and awarded for public display to facilities meeting nationally-set quality standards.

Health facilities will also be strengthened in terms of information, education and communication materials, information, communication technology (ICT) and essential commodities, including basic drugs and contraceptive commodities. Also, facilities will be strongly encouraged to have games for young people, for example, various indoor games.

C. Advocacy and social mobilisation

The aim of the advocacy agenda is to create enabling environment for AYFHS by securing the support of relevant stakeholders and ensuring improved political will, development and implementation of supportive policies, as well as mobilisation of required resources. The advocacy efforts will involve sensitisation of stakeholders, one-on-one or group-targeted activities, and lobbying. In that regard, advocacy is critical for the smooth and sustainable integration of AYFHS into the PHC and for delivering quality services to young people. Creating such an enabling environment is critical to AYFHS delivery because of the several factors and forces that influence both the vulnerability of young people to health risks and their ability to access needed services. These complex factors include: social, economic and political forces, on the one hand, and the health system and its service delivery on the other hand. In this context, three levels of stakeholders will be targeted.

¹⁰ Discussions are ongoing as at the time that this document is being finalized to develop national standards and a minimum package of service for young people in Nigeria. If that process is yet to produce a definitive outcome at the take-off of the implementation of the PHC-AYFHS, it will be important to take practical steps to develop a set of programme standards that will guide implementation in the immediate period.

- *Primary stakeholders:* Parents/guardians and community stakeholders (including religious and traditional leaders, leaders of women, men and youth groups) shall be reached through a combination of communication-related interventions to educate them on the importance of AYFHS and elicit their support and contributions.
- *Secondary stakeholders:* Health workers and other service providers (including teachers of FLHE), health facility leaderships, and relevant professional groups where necessary, shall be targeted to win their support. The support of the head of primary health care facilities will be essential to driving the process of integration at the service delivery points, and ensuring continued monitoring of the quality of services. Youth-serving CSOs functioning at the LGA or community level shall also be targeted with advocacy efforts to secure their support as required and build relevant partnership. Media practitioners shall also be broadly targeted and efforts shall be made to build partnership with media organisations to positively influence the environment.
- *Key stakeholders:* The support of policy makers at LGA and state government levels will be crucial to ensure success. Since PHC is under the jurisdiction of the LGA, specific advocacy efforts shall be targeted at the LGA Chair, the Supervisory Councillor for Health, the LGA Head of Administration, and the PHC Coordinator/Medical Officer of Health. At the state level, the leadership of the Local Government Service Commission and the State Primary Health Care Development Agency (SPHCDA) as well as the Commissioners for Health, Women Affairs, Youth and other line ministries shall be specially targeted. In addition, critical federal level agency will also be a special focus of advocacy activities, particularly the leadership of the National Primary Health Care Development Agency, the MDG office under the Presidency, and leadership of the Family Health Department of the Federal Ministry of Health (which houses the School and Adolescent Health Unit), and the National Technical Working Group on Adolescent Health and Development. International Development Partners with primary interest in Adolescent and Youth Health issues will also receive due attention in the advocacy efforts.

Based on the above, the implementation of the advocacy component of this strategic plan will, therefore, take place at two levels:

- *Programme level:* The programme level activities will be aimed at the immediate social and health service delivery environment, including stakeholders and groups at the local level. Some state level activities that will directly impinge on programme delivery will also take place at this level. The activities at this level shall be shaped by the local factors, players and resources.
- *Strategic level:* The activities at this level shall be cross-cutting in terms of geographical coverage, and will focus mostly on key policy makers at state and federal levels. The strategic level activities will preferably be driven by NPHCDA and FMOH.

Conceptually, the activities under the advocacy component would include stakeholders' analysis, development of functional advocacy plan, development of advocacy materials, deployment of advocacy materials through relevant forums, advocacy visits, stakeholders meeting, and community dialogues. Creation of the "AYFHS brand" will be given special attention as part of advocacy and sensitisation activities; for this purpose, AYFHS logo will be developed, nationally launched, vigorously promoted. The logo will publicly displayed as a mark of availability of quality services for young people by facilities that have met desired national AYFHS standards.

D. Demand creation¹¹

Demand creation will aim at improving young people's knowledge of, and motivation to use AYFHS, with the goal of engendering appropriate health seeking behaviour to improve their overall health and well-being. Communication intervention using multi-media approach will be employed in this respect to get information to young people in a friendly way and influence positive attitude and behavioural change in respect of health-seeking behaviour. The specific activities will be determined locally to ensure youth appeal, local relevance as well as cultural sensitivity to the programme environment. Conceptually, the activities may include development of functional behaviour change communication (BCC) plan,

¹¹ A demand creation framework for youth-friendly services is being developed and will complement this document.

development and distribution of IEC materials, community and school outreaches, health talk, publications, and school debates.

3. IMPLEMENTATION STEPS

3.1. Key Implementation steps

The following sequence is recommended for the implementation of activities for establishing the AYFHS in an integrated manner within the PHC system (Table 1). It is important, however, to note that while the steps presented shows a logical link between the activities and their sequencing, it is by no mean suggestive that one step must be completed before the other begins as many activities can be started simultaneously. The steps highlight more of the output, rather than processes, as the process may need to be initiated far ahead of the time when the output is realised. For example, advocacy efforts at all levels would be preceded by the development of relevant advocacy tools. The distribution of Information, Education and Communication (IEC) materials would be similarly preceded by design and development of relevant materials. Secondly, while the activities are designed within the primary health care level, there will be need for supportive actions at national and sub-national levels for some of the activities. Step 1, which focuses on establishing standards and minimum package of services, is an activity that needs to be done centrally. In addition to advocacy efforts at the community and LGA levels, advocacy should also be carried out at higher levels (federal and state) to further strengthen advocacy and related activities at the local levels.

Table 1: Sequential steps in integrating AYFHS within the PHC system in Nigeria

Steps	Key Action
Step 1	Build consensus on minimum AYFHS package <i>centrally</i> and disseminate to primary health facilities where they should be prominently displayed.
Step 2	Advocate to stakeholders for their support and buy-in for the integration of AYFHS into existing PHC services.
Step 3	Establish governance/management framework and strengthen accountability structure at LGA and community levels to provide input for the creation and management of AYFHS at the PHC level.
Step 4	Select the “model” PHC facilities (rural- and urban-based) to be used in rolling out

- the programme in phases with active participation of young people and consultation with other stakeholders.
- Step 5** Conduct rapid facility assessment to determine the capacity and readiness of the facilities for AYFHS, and determine relevant amendments to be made to the facility structures and processes to enable them meet relevant standards and provide effective AYFHS.
- Step 6** Undertake site preparations, including relevant modifications of the physical structures of the health facilities and service delivery schedules.
- Step 7** Develop and implement human capacity development plan, including training of PHC staff, youth volunteers, community mobilizers and other community resource persons.
- Step 8** Develop/adapt and supply user-friendly job aids, policies and guidelines, including clinical service protocol, to health facility and service providers to assist them in providing quality AYFHS.
- Step 9** Compile information on other available and relevant adolescent and youth-related services within the LGA/community and initiate partnership for the purpose of referrals and network.
- Step 10** Establish/strengthen the mechanism for Management and Evaluation (M&E) and research promotion, including the health management information system (HMIS), to strengthen the tracking, reporting and provision of feedback to service providers on coverage, accessibility and quality of AYFHS.
- Step 11** Develop and implement programme communication plan to publicise the AYFHS service and create demand among young people and their significant others using relevant IEC and BCC approaches.
- Step 12** Undertake the public launch of the PHC-integrated AYFHS with the support of stakeholders at all levels.

3.2. Details of the Implementation Steps

Lead agency	Key Partners	Outputs	Implementation Duration	Remarks
Step 1: Build consensus on minimum AYFHS package <i>centrally</i> and disseminate to primary health facilities where they should be prominently displayed				
NPHCDA	FMOH	National minimum service	3 months	Efforts to build

Lead agency	Key Partners	Outputs	Implementation Duration	Remarks
	Young People CSOs IDPs	package for AYFHS at PHC level approved and disseminated		consensus on national standards on-going as at the time of developing this document
Step 2: Advocate to stakeholders for their support and buy-in into integrating AYFHS into PHC services				
LGA health department SPHCDA/SMOH	Youth groups CSOs	Community structures mobilised, educated and lobbied to accept and support the provision of AYFHS at the PHC level	Continuous	
Step 3: Establish governance/management framework and strengthen accountability structure at LGA and community level to provide input for the creation and management of AYFHS at PHC level				
LGA health department	SPHCDA/ SMOH CSOs, WDC/VDC, Community institutions	Governance/management framework established and community accountability structure at PHC level strengthened to support creation and management of AYFHS	1 month for the establishment of the management framework and strengthening of accountability structure Functioning and strengthening of structure continuous	WDC/VHC is a critical accountability structure ; The governance /management framework include designation of the LGA program manager, and setting up of the LGA TWG & YAG; Active involvement of young people is critical
Step 4: Select the “model” PHC facilities (rural- and urban-based) to be used in rolling out the programme in phases with active participation of young people and consultation with other stakeholders				
LGA health department	Young people/YAG WDC/VDC CSO SPHCDA/ SMOH	“Model” PHC facilities selected with active participation of young people to serve as AYFHS delivery site	1 month	Young people should play frontline role in the process, while other stakeholders provide relevant support.
Step 5: Conduct rapid facility assessment to determine the capacity and readiness of the facilities for AYFHS, and propose relevant amendments to be made to the facilities structures and processes to enable them meet relevant standards and provide effective AYFHS				
LGA health department	CSOs SPHCDA/ SMOH	Capacity gaps and needs of PHC facilities documented, with relevant recommendations made for improvement	2 months	Participatory method should be used in which the YAG will be represented and actively participate
Step 6: Undertake site preparation, including modification of the physical structures of the health facilities and service delivery schedules				
LGA authorities	SPHCDA/	PHC physical facility and	2-3 months	The National

Lead agency	Key Partners	Outputs	Implementation Duration	Remarks
(Chair, Supervisory Councillor for Health, Head of Administration, PHC Coordinator)	SMOH NPHCDA	operations re-structured to attract young people and provide comfort, privacy and quality services to them		Standard and Minimum Service Package should serve as a guide for the process; Involvement of people, through the YAG, is fundamental
Step 7: Develop and implement human capacity development plan, including training of PHC staff, youth volunteers, community mobilizers and other community resource persons				
LGA health department	TWG YAG CSOs SPHCDA/ SMOH	PHC staff and other relevant youth-focussed workers trained in AYFHS delivery.	6 weeks for the development of the plan; 1 st set of training should be carried out before the launch of the programme; Refresher training to take place at least once in 3 years	Training should be carried out using national training manual (or its adaptation) to ensure uniform standard; Training should be conducted by trained/qualified/certified resource persons
Step 8: Develop/adapt and supply user-friendly job aids, policies and guidelines, including clinical service protocol, to health facility and service providers to assist them in providing quality AYFHS				
LGA health department	FMOH SPHCDA/ SMOH CSOs IDPs	AYFHS-focused user-friendly job aids, policies and guidelines produced and distributed to health workers and facilities.	2 months initially and continuously afterwards	The job aids should be produced both in electronic and hard copies (including loading on authorised websites) to ensure easy, cost-effective and wide dissemination; Every trained provider must be provided the National Service Protocol during the training; Every facility must have the job aids publicly displayed and available to all health workers
Step 9: Compile information on other available and relevant adolescent and youth-related services within the LGA/community and initiate partnership for the purpose of referrals and network				
LGA health department	SPHCDA/ SMOH CSOs	Compendium/ compilation of adolescent and youth focused services and youth-serving organisations	1 month initially, and continuously updated afterwards	The compendium should include services provided by CSOs, and both

Lead agency	Key Partners	Outputs	Implementation Duration	Remarks
		available by type, location and contact information of key service providers		health and non-health related adolescent and youth-focused services; Primary linkage and strong partnership should be established with the school-based FLHE and school health services
Step 10: Establish/strengthen the mechanism for M&E and research promotion, including the health management information system (HMIS), to strengthen the tracking, reporting and provision of feedback to service providers on coverage, accessibility and quality of AYFHS				
LGA health department (HMIS unit)	SPHCDA/ SMOH CSOs IDPs	Monthly service statistics submitted as well as quarterly and annual programme reports available, feedback provided to service providers and used for service improvement Operation and implementation research conducted to improve service delivery and utilisation	3 months initially and continuously afterwards	Relevant modifications to existing HMIS instrument to address AYFHS concerns to be carried out at federal or state level; The AYFHS M&E process should be appropriately integrated into the routine HMIS process Data quality, demand and use analysis should be carried out periodically on AYFHS-related data
Step 11: Develop and implement programme communication plan to publicise the AYFHS service and create demand among young people and their significant others using relevant IEC and BCC approaches				
LGA health department	Young people/YAG SPHCDA/ SMOH Media outfits CSOs	IEC materials developed and disseminated BCC campaign carried out	2 months intensive phase at the beginning, and continually afterwards	Diverse media relevant to young people, their parents/guardians and other relevant stakeholders should be use, including print IEC materials, electronic media, community-based outreaches, mobile phone and social

Lead agency	Key Partners	Outputs	Implementation Duration	Remarks
				media
Step 12: Undertake the public launch of the PHC-integrated AYFHS at the LGA with active support of stakeholders at all levels				
LGA	SPHCDA/ SMOH NPHCDA FMOH IDPs CSOs	Official public launch of PHC-integrated AYFHS	1-day (at each level)	Official launch to take place at LGA/ community level (and also at federal and state level at appropriate time)

3.3. Minimum package of services for AYFHS in Nigeria

The minimum package of AYFHS in the context of PHC for Nigeria includes the elements described below, both in terms of the core services and the supportive resources and facilities. It is important to note that for a facility to be declared to have a standard AYFHS, it must first meet the standard/requirement stipulated in the MWHCP for its level of service.

3.3.1. Core Preventive and Treatment Services

A. CLINICAL PREVENTIVE SERVICES

- Health monitoring (such as risk assessment and counselling)
- Provision of health information and behaviour change communication activities
- Immunisation services relevant for young people
- Provision of skilled counselling on key adolescent and youth health concerns, including pubertal concerns, sexual and reproductive health, nutrition, substance use, mental health, violence prevention
- Provider-initiated HIV counselling and testing
- Provision of contraceptive counselling and services, including emergency contraceptive services
- Promotion of nutrition education to young people
- Community mental health services, including mental health education and counselling on substance abuse prevention
- Advice and counselling on oral care

B. COMMUNITY-BASED HEALTH OUTREACH SERVICES

- At least one outreach to schools monthly
- Periodic and regular community mobilisation for adolescent health

C. TREATMENT/CURATIVE SERVICES

- History-taking, risk assessment, and physical assessment
- Management of menstrual health problems and related pubertal concerns
- Treatment of sexually transmitted infections
- Treatment of common health problems
 - Fever
 - Diarrhoea
 - Respiratory infections
 - Skin diseases
 - Worm infestation
- Treatment of minor accidents
- Pregnancy-related care
 - Antenatal services
 - Delivery of uncomplicated pregnancies
 - Basic emergency obstetric care
 - Post-abortion care
 - Post-natal services
- Basic laboratory services

D. REFERRAL TO OTHER SERVICE PROVIDERS AS NECESSARY

- Effecting referrals for all cases above the level and following up (two-way referral)
- Counselling and motivation for referral

3.3.2. Supportive Resources and Facilities

The following facilities should be in place to support the integrated AYFHS:

A. HUMAN RESOURCES

- Minimum of two nurses/midwives/nurse-midwives trained in AYFHS
- Minimum of one Community Health Extension Worker (CHEW) orientated in AYFHS

B. INFRASTRUCTURE AND MATERIALS

- Specifically-designated room or service delivery point for adolescent services
- Publicly displayed materials indicating that AYFHS are available and young people are welcomed
- Clinical protocols for AYFHS
- Job-aids including flowchart for the treatment of common health problems
- Television and video/CV/DVD player
- IEC materials on young people's health concerns such as posters and take-home educational materials such as handbills

C. INVOLVEMENT OF YOUNG PEOPLE AND OTHER STAKEHOLDERS

- Volunteer young people working with health facility
- Young advisory group that meets at least once monthly
- Existence of functional WDC or VDC

D. HEALTH MANAGEMENT INFORMATION SYSTEM

- Availability of adolescent and youth-oriented HMIS materials
- Monthly generation of AYFHS data to LGA HMIS officer

4. ACTION PLAN

STRATEGIC GOAL: Integration of adolescent- and youth-friendly health services into existing primary health care

4.1. Integrated Service Delivery

Demand creation¹²																		

¹² Details of key activities for demand creation is available in the complimentary “Demand creation framework for youth-friendly services”

APPENDIX 1: Required National Minimum Resources and Infrastructure for Primary Health Clinics in Nigeria¹³

A. Building and Premises:

- A detached building with at least five rooms
- Walls and roof must be in good condition with functional doors and netted windows
- Functional separate Male and Female toilet facilities with water supply within the premises
- Availability of a clean water source: at least a sanitary well
- Be connected to the national grid and other regular alternative power source
- Have a sanitary waste collection point
- Have a waste disposal site
- Be clearly signposted – visible from both entry and exit points
- Be enclosed by a fence
- Staff accommodation provided within the premises or the community

The building must have sufficient rooms and space to accommodate:

- Client observation area
- Consulting area
- Delivery room
- First stage room
- Injection and dressing area
- Lying-in ward (4 bed)
- Pharmacy section
- Record section
- Staff station
- Store
- Toilet facilities (or Ventilated Improved Pit Toilet)
- Waiting/reception area appropriate for young people
- Counselling room or corner for young people
- Basic laboratory facilities

B. Furnishing

- | | | |
|----------------------------------|---|-----|
| • Benches | - | 8 |
| • Chairs | - | 10 |
| • Cupboards | - | 2 |
| • Curtains for windows and doors | - | all |
| • Delivery bed | - | 1 |

¹³ National Primary Health Care Development Agency. Minimum Standards For Primary Health Care In Nigeria. The Minimum Standards For Primary Health Care integration to YFHS already exist and do not require additional cost implication

• Examination couch	-	2
• Observation beds	-	4
• Screen	-	2
• Wash hand basin	-	2
• Wheel Chair	-	1
• Writing table	-	3

C. Medical equipment

• Adult weighing scale	-	2
• Ambubag	-	1
• Artery forceps	-	2
• Baby weighing scale	-	1
• Bed pan	-	4
• Bed sheets,	-	2 per bed
• Clinical thermometers	-	2
• Cold boxes	-	1
• Cord clamps	-	1 pack
• Curtains	-	1 per window
• Cusco's speculum	-	2
• Disposables (facemask, gloves, etc)	-	1 pack each
• Dissecting forceps	-	2
• Dressing forceps	-	2
• Dressing trolley	-	1
• Enema kits	-	2
• Episiotomy scissors	-	2
• Foetal stethoscope	-	2
• Instrument tray	-	2
• Kidney dishes	-	4
• Kidney dish	-	2
• Lanterns, Buckets	-	2 each
• Multistix test kits	-	1 pack of 100
• Needle holding forceps	-	2
• ORT Demonstration Equipment	-	1 set*
• Refrigerator	-	1
• Scissors	-	2
• Sims speculum	-	2
• Solar Refrigerator	-	1
• Sphygmomanometer	-	2
• Stadiometer	-	1
• Stethoscope	-	2
• Sterilisation equipment	-	1
• Stove	-	1
• Suction machine or (mucus extractors)	-	1
• Tape rule	-	1
• Urinary catheter	-	2 of each size

* Cup, jug, wash basin, towel, bucket, standard beer or/and soft drink bottles

- Geo Style Vaccine Carriers (GSVC) - 2
- Ice Packs - 4 per GSVC

D. Personnel trained in AYFHS

- Midwife or Nurse Midwife - 2
- Community Health Extension Worker (CHEW) (must work with standing order) - 2
- Junior Community Health Extension Worker (JCHEW) - 4
- Support staff
 - Health attendant/Assistant - 2
 - Security personnel - 2

E. Hours of operation

- The facility should run 24 hours services
 - CHEWs/ JCHEWs will distribute their working time as follows;
 - JCHEWs: 60% in the health facility and 40% in the communities
 - CHEWs: 80% in the facility and 20% in the communities

F. Standing Order

- CHEWs and JCHEWs must work with the Standing Order

G. Other Requirements

- Means of communication; e.g. mobile phone or communication radio (1)
- Motorcycle (1)
- Bicycle (1)
- Small motor boat for riverine areas (1)
- Recreational facility (at least indoor games)
- Adapted HMIS tools

H. Essential drugs

The following complete Essential Drug List is to be utilised at this level;

Group	-	Formulation
--------------	----------	--------------------

I. ANAESTHETICS, LOCAL

Lidocaine	-	Topical, injection
-----------	---	--------------------

II. ANALGESICS

* Acetylsalicylic Acid	-	Tablet
------------------------	---	--------

* Not for children

Paracetamol - Oral liquid, tablet

III. ANTI-ALLERGICS

Chlorphenamine - Oral liquid, tablet

Epinephrine (Adrenaline) - Injection

Promethazine - Tablet, oral liquid

IV. ANTICONVULSANTS

Diazepam - Injection

*Paraldehyde - Injection

Phenobarbital - Tablet

V. ANTIDOTES

Atropine - Injection

Charcoal (activated) - Powder

VI. ANTI-INFECTIVE DRUGS

Antibacterial drugs

Amoxicillin - Capsule

Benzathine Penicillin - Injection

Benzylpenicillin - Injection

Co-trimoxazole - Tablet, oral liquid

Erythromycin - Tablet

Gentamicin - Injection

Nitrofurantoin - Tablet

Phenoxymethylpenicillin - Tablet

Streptomycin - Injection

* Marked for deletion

**Tetracycline - Capsule

Antileprosy drugs

Clofazimine - Capsule

Dapsone - Tablet

Rifampicin - Capsule or tablet

Amoebicide

Metronidazole - Tablet

Anthelmintics

Mebendazole - Tablet

Praziquantel - Table

Pyrantel - Oral liquid, tablet

Antifilarial

Diethylcarbamazine - Tablet

Antimalarials

Artemether + lumefantrine - Oral liquid, tablet

Artesunate - Suppositories

Artesunate + amodiaquine - Tablet

Quinine - Injection*

Pyrimethamine + sulfadoxine - Tablet, oral liquid

Anti-tuberculosis drugs

Ethambutol - Tablet

** Not recommended for children and pregnant women

* Intramuscular, for pre-referral treatment only

Isoniazid	-	Tablet
Pyrazinamide	-	Tablet
Rifampicin	-	Capsule, tablet

VII. ANTISEPTICS AND DISINFECTANTS

Benzoin	-	Compound tincture
Chlorhexidine	-	Solution
Iodine	-	Solution
Methylated spirit	-	Solution
Sodium hypochlorite	-	Solution

VIII. DERMATOLOGICAL DRUGS

Benzoic acid+salicylic acid

(Whitfield's)	-	Ointment
Benzoyl peroxide	-	Cream or gel
Benzyl benzoate	-	Emulsion
Calamine	-	Lotion
Gentamicin	-	Ointment
Methyl salicylate	-	Ointment
Neomycin+Bacitracin	-	Ointment, powder
Nystatin	-	Ointment, cream
Zinc oxide	-	Ointment

IX. DRUGS AFFECTING THE BLOOD

Ferrous salts	-	Oral liquid, tablet
Folic acid	-	Tablet

X. DIAGNOSTIC AGENT

Tuberculin	-	Injection, PPD
------------	---	----------------

XI. DRESSINGS AND MEDICAL DEVICES

Absorbent gauze bandages

Cotton wool (absorbent)

Disposable gloves,

Disposable syringes - 5 mL with needles (19, 21 Gauge)

Disposable syringes - 2 mL with needles (19, 21 Gauge)

XII. EAR, NOSE AND THROAT DRUGS

Chloramphenicol - Ear drops

XIII. GASTRO-INTESTINAL DRUGS

Hydrocortisone + lidocaine - Suppository

Hyoscine N-butylbromide - Tablet

Magnesium Sulphate - Injection

Magnesium trisilicate - Compound tablet, oral liquid

Misoprostol - Tablets

Oral Rehydration Salts

Senna - Tablet

Zinc - Oral liquid, tablet

XIV. HORMONES AND SYNTHETIC SUBSTITUTES

Barrier methods - Condoms with or without spermicide

Oral contraceptives/Emergency contraceptives - Tablet

Essential Medicines List (Fifth Revision 2010)

APPENDIX 2: Required National Minimum Resources and Infrastructure for Primary Health Centres in Nigeria¹⁴

A. Building and Premises

- A detached building of at least 10 rooms
- Walls and roof must be in good condition with functional doors and netted windows
- Functional separate Male and Female toilet facilities with water supply within the premises
- Have a clean water source from a borehole
- Be connected to the national grid and other regular alternative power source
- Have a sanitary waste collection point
- Have a waste disposal site
- Be clearly signposted – visible from both entry and exit points
- Be fenced
- Staff accommodation provided within the premises or the community
- Recreational facility

The building should have sufficient rooms and space to accommodate;

- Waiting/Reception areas for Child Welfare, ANC, Health Education and ORT corner
- Waiting room/reception area that is appropriate for young people
- Staff station
- 2 consulting rooms
- Adolescent counselling/health service room
- Pharmacy & Dispensing unit
- 2 delivery room
- Maternity/lying-in section
- In-patient ward section
- Laboratory
- Medical records area
- Injection/Dressing area
- Minor procedures room
- Food demonstration area
- Kitchen
- Store
- Toilet facilities (Male and Female)

The premises should:

- Have a waste disposal site
- Be fenced and provided with staff quarters or accommodation within the community.
- Be connected to the national grid and provided with alternate power sources.

¹⁴ National Primary Health Care Development Agency. Minimum Standards For Primary Health Care In Nigeria
The Minimum Standards For Primary Health Clinics for integration to YFHS already exist and do not require additional cost implication

Furnishing and Medical equipment

S/N	Item description	Qty	S/N	Item Description	Qty
	FEMALE WARD			INFANT AND CHILD WELFARE	
1.	Angle poised lamp	1	1.	Basket with lid for ORS	2
2.	Artery forceps (Medium)	4	2.	Ceiling fan	1
3.	Bed pan (stainless steel)	2	3.	Plastic Chairs	2
4.	Bowls stainless steel with stand	2	4.	Stainless covered bowl for cotton wool	1
5.	Ceiling fan	2	5.	Dressing Trolley	1
6.	Plastic chair (President)	2	6.	Cup, medicine, graduated	4
7.	Stainless covered bowl for cotton wool	2	7.	Dust bin (pedal)	2
8.	Graduated medicine, cup	2	8.	Stainless Galipot (medium size)	1

B. Personnel trained in AYFHS

- Medical officer if available - 1
- CHO (must work with standing order) - 1
- Nurse/midwife - 4
- CHEW (must work with standing order) - 3
- Pharmacy technician - 1
- JCHEW (must work with standing order) - 6
- Environmental Officer - 1
- Medical records officer - 1
- Laboratory technician - 1
- *Support staff*
 - Health Attendant/Assistant - 2
 - Security personnel - 2
 - General maintenance staff - 1

C. Hours of operation:

- 24 hours (Twenty-four hours)

D. Other Requirements

- Ambulance Vehicle (1)

- Bicycle (1)
- Communication facility; Mobile phone or Communication Radio (1)
- Computer (2)
- Internet services
- Motorcycle (1)
- Small motor boat for riverine area (1)

E. Essential drugs:

The complete Essential Drug List below is to be utilised at this level.

Group	Formulation			
ANAESTHETICS, LOCAL				
Lidocaine	- Topical, injection	Benzylpenicillin	-	Injection
		Co-trimoxazole liquid	-	Tablet, oral
